FOR IMMEDIATE RELEASE

March 23, 2009

Fielding JNE to bring sustainable waste management practices to China

Ellen McGregor, President of Fielding Chemical Technologies Inc. and Joe Ng, President of JNE Consulting are excited to announce that their two companies have joined forces to sell turnkey solvent recovery and refrigerant reclamation plants in China. The joint venture – called Fielding JNE - will design, build and commission plants, and will provide the expertise required to responsibly manage chemical and refrigerant wastes.

Although JNE had provided engineering services to Fielding over the years, the two company Presidents first met on the Trade Mission to China, led by Premier Dalton McGuinty last fall. They immediately recognized the potential of a joint venture said Fielding President Ellen McGregor: "JNE's presence in China and their extensive experience in building successful plants there, combined with Fielding's experience and expertise in solvent and refrigerant reclamation make this partnership a perfect fit that will enable China to advance its green agenda."

Over the past 50 years, Fielding has helped hundreds of companies save money and honour their commitment to environmental stewardship by turning spent chemicals into high quality products. JNE has successfully completed numerous design and supply contracts in China ranging from \$1 million to \$40 million. "The design/build work will be done locally", says JNE President Joe Ng, "so that this new venture will result in the creation of Ontario jobs in the clean tech sector, directly in alignment with Premier McGuinty's vision for the province." The new company will be promoting its product at the upcoming Ontario Trade Mission to China in April 2009.

About Fielding...

Fielding is a cutting edge Canadian owned environmental company. Through use of state-of-the-art technologies, including patented pervaporation technology, Fielding provides new life to spent solvents and refrigerants. The company's capabilities, credentials and commitment to the waste management hierarchy make it an integral player in sustainable chemical manufacturing.
